

Francisco Vitar

Software Engineer | Full-Stack Product Engineer

Cordoba, Argentina | franvitar15@gmail.com | linkedin.com/in/franciscovitar | github.com/franciscovitar

PROFESSIONAL SUMMARY

Fourth-year Systems Engineering student at UTN and Software Engineer building full-stack products, data-backed applications and AI-assisted engineering workflows. Strong academic performance in software/systems coursework complements hands-on delivery of TypeScript/Next.js systems with PostgreSQL-backed data flows, automated testing, privacy/safe-change boundaries and AI-native orchestration.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS/SCSS

Frontend / Data: React, Next.js, PostgreSQL, Supabase, relational data modeling, API integrations

Engineering: Automated testing, Playwright, Git/GitHub, CI/check workflows, regression verification

AI-assisted engineering: agent/tool orchestration, evidence and verification workflows

EXPERIENCE

Founder & Software Engineer - Genova | Cordoba, Argentina | 2022-Present

- Founded a bootstrapped software/web product studio and delivered 5+ client websites/products.
- Owned requirements, information architecture, implementation, integrations, deployment and iteration.
- Built and maintained React/Next.js products and added stronger regression/verification practices.

SELECTED PROJECTS

Football Intelligence App - Next.js, TypeScript, PostgreSQL | Active / In progress

- Transactional publication from QA-approved research into PostgreSQL with read-only public data paths, provenance, explicit missing-data semantics and deterministic public read models.

Vida 2.0 - Next.js, React, TypeScript | Personal operating system

- Authenticated multi-domain app integrating Notion, Google Sheets and Calendar with explicit source boundaries, fail-closed behavior, safe-write/idempotency rules and automated/preflight checks.

Personal AI System - Python, GitHub, AI/tool orchestration | Private system

- Modular AI-assisted work system with capability-based routing, source authority, evidence/provenance, eval-oriented workflows, least-privilege execution policy and agent-security boundaries.

EDUCATION

Universidad Tecnologica Nacional (UTN) - Systems Engineering | 2023-Present | 4th year (2026)

Selected grades: Software Development 9/10, Databases 9/10, Backend Applications 9/10, Programming Paradigms 9/10; Operating Systems, Algorithms & Data Structures, Computer Architecture and Data Communications 8/10.

LANGUAGES

Spanish: Native | English: Working proficiency (strong reading/listening; conversational speaking)
